

IN THE CLAIMS:

1. (cancelled) A machine for automated generation of movement of chimes comprising:

- a base;
- a pump in said base for moving liquid into a receptacle;
- at least one chime disposed in said receptacle;
- a control circuit for generating electric power to said pump for moving said liquid in said receptacle; and
- a fixed body in said receptacle against which said chime contacts thereby making a noise.

2. (original claim) A machine for automated generation of movement of chimes comprising:

- a base having a motor for generating intermittent power;
- a pump for moving liquid that operates by said motor;
- a wind generator powered by movement of liquid;
- chimes disposed in proximity to said wind generator that move in response to the wind.

3. (cancelled) A machine for automated generation of movement of chimes comprising:

- a base having a motor for generating intermittent power to a pump;
- a pump for pumping liquid;
- a chime that moves in direct response to movement of liquid thereby creating a sound.
